ABOUT US

Engineering that shows up, stays close, and closes out.

KIMDU is a Northern Cape-based engineering and project support firm. We deliver infrastructure work across South Africa — combining civil and structural engineering, project management, construction supervision, and condition assessments under one appointment.

Our clients span mining houses, tier-one consultants, public-sector bodies, and private developers. What they share is a need for a partner who is technically strong, commercially pragmatic, and genuinely present on the work.

Projects Completed

Level 1
B-BBEE Status

51% Youth & Women Owned · Black-Owned Business · ECSA-Registered Directors

WHY KIMDU ?

EVERY APPOINTMENT IS ANCHORED IN THREE NON-NEGOTIABLES.

The Technical Work Holds Up

Our ECSA-registered directors have built a track record across civil, structural, roads, and water infrastructure.

We design to a standard we put our names to — and we're equally careful about what we choose not to take on.

We're on Site, Not Just in the Inbox

Our reputation was built in the field.

KIMDU appointments run through to supervision, quality oversight, and snag-list close-out — the phases where real presence makes the difference.

A Commercial Decision That Works

Level 1 B-BBEE, black-owned, 51% youth- and women-owned.

Credentials open doors, what we do behind them earns the next appointment.

COMPANY CREDENTIALS

WHAT WE DO

We offer a focused range of engineering and project support services built around the realities of infrastructure delivery. Whether you need technical input at design stage, someone on the ground during construction, or structured project oversight from start to finish — KIMDU brings the capability and commitment to get it done properly

CIVIL & STRUCTURAL ENGINEERING

Practical engineering support for civil and structural projects — from technical input and design coordination through to advisory services that keep delivery on track.

WATER, ROADS & STORMWATER

Hands-on support across water supply, sanitation, roads, and stormwater — working within the broader demands of infrastructure and built-environment delivery programmes.

PROJECT MANAGEMENT & CONTRACT ADMINISTRATION

End-to-end project coordination and contract administration, managing progress, documentation, and stakeholder obligations to keep projects compliant, on programme, and properly closed out.

CONSTRUCTION SUPERVISION & SITE REPORTING

Qualified eyes on site — covering inspections, quality oversight, progress monitoring, and structured reporting across civil, structural, SMPP, and E&I scopes.

BUILDING ASSESSMENTS & REFURBISHMENT

Structured condition assessments and refurbishment support for existing buildings and infrastructure assets — giving clients a clear picture of what's needed and how to get there.

TECHNICAL REPORTING & PROJECT SUPPORT

Technical reporting, document management, and project support tailored to client governance requirements — the structured backbone that keeps implementation on solid ground

PROJECT EXPERIENCE

Roads Infrastructure

Barkly West R31 Resurfacing

TE-partner engineering for periodic maintenance and resurfacing of National Route R31 Section 8 — a national-route appointment delivered alongside tier-one partners.

Construction Supervision

Sishen Koketso Project

Site-based oversight and reporting for a major mining-linked project — keeping delivery aligned with the programme and specification through an independent technical presence.

Building Assessment

Padstow Clinic Renovation

Condition assessments across three health clinics, leading to full design and implementation for Padstow — a complete arc from scoping report to completed facility.

Residential Infrastructure

Seodin Weg & Cillier Avenue

Full engineering services for a new residential development: streets, water and sewer reticulation, pump station, stormwater, NHBRC enrolment, and on-site inspections.

Water Infrastructure

Glen Red Water Supply

Project management for implementing the Glen Red Water Supply scheme — the essential, unglamorous work that determines whether a community gets water at the tap.

Civil Rehabilitation

Borrow Pit Rehabilitation

Engineering design and construction supervision for post-extraction civil works — restoring the landscape and closing the site to environmental and stakeholder standards.

Community Infrastructure

Camden Tribal Offices

Engineering services for the renovation of the Camden Tribal Offices — assessment-to-refurbishment work for infrastructure serving local communities.

MEET THE TEAM

KIMDU is led directly by the people responsible for the work. Both directors take the brief, carry the appointment, and are on-site — no handoff between the partnership you sign and the team that delivers.

Marshé Radebe **Director · B.Eng (Civil) · 10+ Years**

Marshé brings over a decade of civil engineering experience across infrastructure delivery, project management, and construction supervision. She is particularly effective at steering multi-disciplinary teams through implementation phases — where projects are won or lost.

Affiliated with SAICE. Registered with ECSA

Ian Kemp **Director · Pr.Eng · 17+ Years**

Ian is a Professional Engineer with more than seventeen years of consulting experience. His track record spans civil and structural engineering, roads and water infrastructure, construction supervision, and technical leadership on multi-party appointments.

Affiliated with SAICE. Registered with ECSA (Pr.Eng).

LET'S TALK

We welcome conversations at any stage — early feasibility, condition assessments, tender opportunities, or sub-consultant and joint-venture appointments on larger programmes.

The easiest first step is a short call to walk through your project and how we can help.
